

Making climate smart agriculture work for the poor

**Anne Tarvainen
Ministry for Foreign Affairs of Finland**

Finland supports

- The adaptation of the poorest and most vulnerable countries
 - Participation of developing countries in the climate change negotiation processes.
- 
- A photograph showing a group of women in a market setting, likely in a developing country. They are sorting through large sacks of potatoes. The women are wearing headscarves and traditional clothing. The background shows a busy market with other people and buildings.
- Special emphasis is placed on equality and the promotion of the status of women both at the local level and in the international climate policy.

Why does Finland support a gender sensitive approach?

- The impacts of climate change will hit women hardest in developing countries.
- Women's roles and responsibilities make them especially vulnerable, it also makes them powerful agents of change.

Mitigation of Climate Change in Agriculture (MICCA) Project

- GOAL: Support of efforts in developing countries to contribute to climate change mitigation in agriculture by moving towards climate smart agricultural practices
- Foundation: 5 year multi-donor trust fund, 2010-2014 , US\$ 10 million (Finland, Germany & Norway)

**We believe that it is not enough that only one half
of the world's population would be able to take
care of environmental problems;
without inclusion we will fail.**
