

Mobilising climate finance from the private sector

Abyd Karmali

Managing Director & Global Head of Carbon Markets, BofAML

COP-18, Doha, December

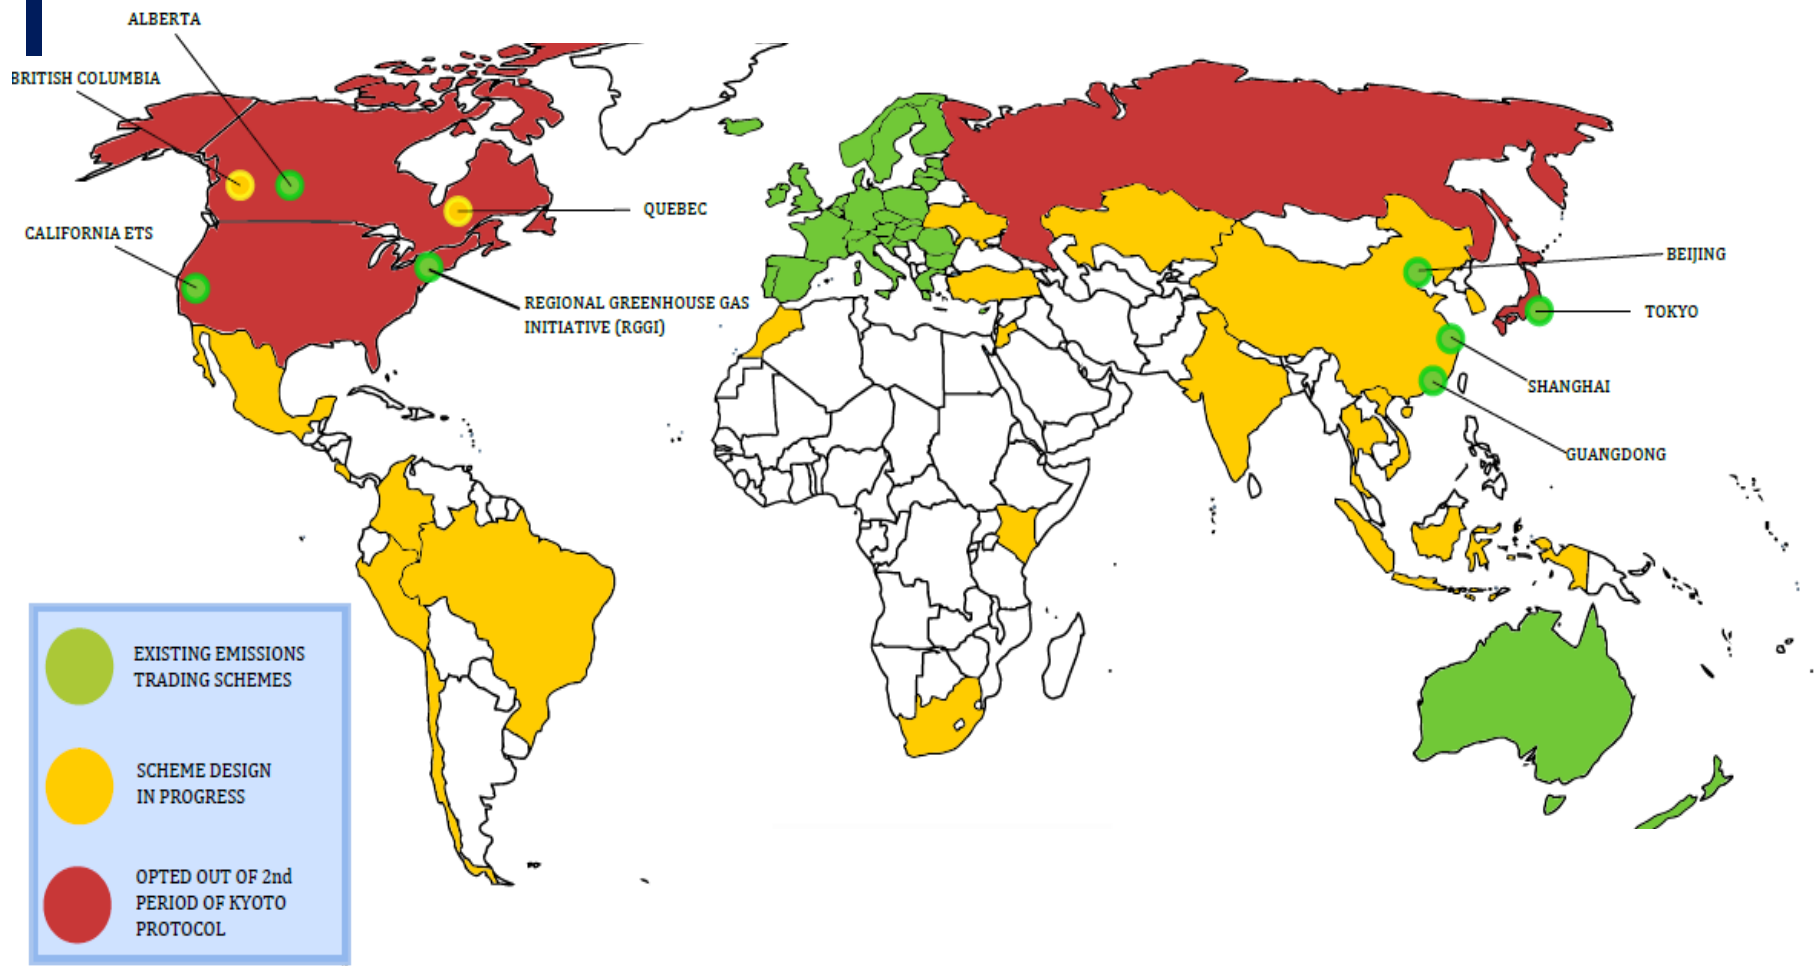

Setting the current context from private sector perspective

- Bridging the emissions gap will require implementing a suite of mitigation wedges whose deployment is enabled through smart use of climate finance.
- The incremental financial requirements are substantial – estimated at more than USD 60-175 billion/year – *IEA (2012)*
- There is clear consensus that the private sector has a critical role to play in financing the shift to a low-carbon economy.
 - The limited public finance available must incentivise a massive amount of private investment by reducing the risk or lowering the cost of capital for investors – *Long-Term Finance Workshop (2012); CAN submission to ADP (2012)*
 - “Private initiatives motivated by profit are essential in seeking out and implementing least cost options for mitigation and adaptation. The dominant scale of global private capital markets and the growing fiscal challenges in many developed countries also suggest that the large financial flows required for climate stabilisation and adaptation will, in the long run, be mainly private in composition” – *G20 Finance Ministers (2011)*
 - Agreement from all key investor groups about the kinds of instruments that will stimulate larger flows of private finance – *Glen House Recommendations (2012)*
- Carbon pricing continues to expand in new regions around the world...but faces headwinds for a variety of reasons including supply-demand imbalances, the adverse impacts of macroeconomic factors, and price competitiveness of fossil fuels.

Development of carbon pricing around the world

Risk/reward equation will likely remain challenging

- Clean energy finance is growing consistently...but renewable market share has not changed and macro-picture suggests fossil fuels will remain competitively priced
- Fundamentally, the risk-reward equation has not tilted sufficiently from the high-carbon business-as-usual option to the low-carbon climate-resilient alternative.
 - With few exceptions, investors interested in low-carbon opportunities are missing transparency, longevity, and certainty (TLC) of pricing signals.
- New financial institutions like the UN Green Climate Fund's Private Sector Facility offer an international testing ground to pilot new mechanisms pre-2020.
- Other new national institutions are being set up to fill the gaps
 - UK Green Investment Bank
 - Australia Clean Energy Finance Corporation
- While existing institutions are rapidly evolving their mission
 - US OPIC
 - Germany KfW
 - Brazil BNDES

Continued growth in clean energy finance

Evolving reality about distribution of oil, coal, and gas supplies

Percentage of global fossil fuel reserves held

Suggested financial mechanisms to scale up and speed up

Category→ Sector	Increasing Returns	Reducing Risks	Transformational
<i>Large-scale clean energy</i>	1. Bankable Power Purchase-Like Agreement for Energy Efficiency 2. Subsidised Renewable Feed-in Tariff	3. Mezzanine Debt Enhancement 4. Clean Energy Loan Guarantee 5. Mono-Line Insurance for First Loss	
<i>Bio-carbon</i>	6. Advanced Market Commitment for REDD+	7. Political risk insurance mechanism	
<i>Energy access</i>	8. Emission Reducing Under-writing Mechanism to Purchase for CERs from LDCs	9. Public-private fund to absorb potential first loss from high-risk investments in LDCs	10. Revolving fund for low-carbon social enterprise focusing on energy access 11. Pooled fund for small-scale VC to promote low-carbon social enterprises in LDCs
<i>Adaptation</i>	12. Vulnerability Credit Mechanism		

Private capital is ready: BofA has made a USD 50 billion commitment

- A new ten year company-wide environmental business goal to address climate change, reduce demands on natural resources, and advance lower-carbon economic solutions
 - New goal takes effect 1 January 2013
 - Current ten year, USD 20 billion initiative will be exceeded more than 4 years ahead of schedule
- Goal encompasses lending, equipment finance, capital markets and advisory activity, carbon finance, and advice and investment solutions for clients
- Builds on legacy of environmental leadership in the financial sector
 - First financial institution to publicly commit to GHG emission reduction targets (2004)
 - One of the first financial institutions to launch a substantial, formal business initiative (2007)
 - Partnered to build the Bank of America Tower in NYC, the world's first Platinum-certified high-rise office building under LEED core rating system (2009)
- New internal environmental goals for 2015, using 2004 baseline:
 - 20% reduction in water consumption
 - 25% reduction in energy consumption
 - 30% reduction in GHG emissions
 - 70% diversion of global waste from landfills
