

Scaling-up early warning and early action through comprehensive disaster and climate risk management

Friday, 11 Nov
15:00 – 16:30

Hatshepsut Room,
Blue Zone

The ambitious plan to achieve Early Warnings for All in the next five years requires an all-out effort by multiple actors, stakeholders, and institutions. The event will focus on enabling factors, including integrated disaster risk reduction and climate action that will make this vision a reality.

A comprehensive disaster and climate risk management approach sets the basis for joint and shared responsibilities to facilitate such integration, including through stronger linkages between institutions and planning processes.
