

## Panel Questions

### Common question to all panel members:

- What should Asian climate negotiators do to reflect Asian concerns and interests on various issues in the future climate regime more proactively than before?

### Energy security

- What role do you envision for the future regime in national efforts to mainstream climate concerns in energy policy?
- Several Asian countries are promoting energy efficiency and renewable energy by setting national targets. How can the future regime promote such efforts? Would developing countries in Asia be willing to link such targets to an international agreement if the future climate regime can create adequate incentives?
- What role do you envision for the future climate regime to help in promoting clean energy investments in Asia?

## Developmental Needs

- To what extent, SD-PAMs approach will be effective and meaningful in Asia? How can the future regime mobilize finance to support SD-PAMs?
- How can the future climate regime assist Asian countries proactively promote identification of co-benefits the local environment and developmental co-benefits of mitigation policies and measures in various sectors?
- What role do you envision for the future climate regime to assist in national efforts to mainstream climate concerns in development planning?

## CDM

- How can future climate regime facilitate integration of CDM in national development policy?
- How can Asia benefit from widening the scope of CDM and what should be done to enable this in the post-2012 regime? Also how can the future regime help enhance the geographic equity of CDM projects in Asia in the future?
- How can we mobilize more funds for CDM, especially underlying finance, in the post-2012 regime?

## ***Technology Development and Transfer***

- Which mechanisms are crucial to build synergies between the UNFCCC and non-UNFCCC initiatives in order to address Asian concerns on technology comprehensively?
- How can we enhance the flexibility of intellectual property rights for low carbon technologies?
- How can the future climate regime enhance funding for facilitating collaborative technology R&D and broaden the funding base for technology transfer in Asia?

# Adaptation

- Is designing a separate protocol on adaptation protocol in the future climate regime necessary? If so, should it be focusing more on LDCs and SIDS rather than covering all countries?
- How can future climate regime support the efforts to mainstream adaptation concerns in development planning?
- How should the future regime address the issues of adaptation funding? What is the most suitable governance structure for adaptation fund?
