**Strengthening interface between
SDGs and climate action**

COP28 COMPASS

Road to Dubai and Global Goal on Adaptation

A robust, equitable, and flexible framework on GGA will be a key determinant of the success of COP28.

Rooted in CBDR-RC; Link NCQG; Means of implementation.

IPCC definition of adaptation emphasizes human and natural systems and not countries. A paradigm shift in the climate regime is needed regarding adaptation. Need to revisit the problem statement.

COP28 COMPASS

Just Energy Transition Partnerships, Climate Action and Minilateralism

JETPs need to follow a more holistic approach that aligns with the existing multilateral climate finance mechanisms.

Should not add to the debt burden of countries.

Existing JETPs suffer from a lack of interconnection between the energy demand and the supply side.

Insufficient focus on R&D and breakthrough technologies.

SDG CHARTER

Internationalizing Lifestyles for Sustainable Development

G20 High-Level Principles on Lifestyles for Sustainable Development.

SDG 12 indicators can include/have more downstream indicators.

UNGA resolutions - focus on sustainable consumption but not in terms of linking behavioral change.

Agenda item - Article 2 of the UNFCCC

SDG CHARTER

Multidimensional Model of Green Budgeting

Locus standi of environment ministries/departments is limited as much of the implementation lies with other line ministries/departments and public agencies..

Essential that environment and climate is mainstreamed across ministries, departments, and sectors.

Multidimensional model of green budgeting to contribute to environmentally and climate-sensitive planning.

COP28 COMPASS

**Global Goal on
Adaptation**

**JETPs, Climate Action
and Minilateralism**

SDG CHARTER

**Internationalizing Lifestyles
for Sustainable Development**

Green Budgeting
