

## FROM GLOBAL CRISIS TO GREEN RECOVERY

Opportunities to promote a green industrial revolution

The challenge of confronting climate change presents the world with an unprecedented opportunity to modernize our economies on a sustainable basis. Climate protection is the key that can unlock the creativity of communities, entrepreneurs, civil society and other actors throughout developed and developing nations. Combating climate change goes hand in hand with sustainable economic modernization and thus can be the basis for a "green" industrial revolution.

This side event convenes senior representatives from governments, industry and the finance sector for a serious discussion about how public policy instruments and markets can effectively work together in order to create compelling new opportunities for society and the private sector in a low carbon world.

Federal Ministry for the  
Environment, Nature Conservation  
and Nuclear Safety
