

SOUTHERN AFRICAN CONFEDERATION OF AGRICULTURAL UNIONS

FARMERS are part of the SOLUTION

Agriculture can no longer be ignored

Agriculture is the foundation of most African economies and the most climate-sensitive sector

Climate change will have **severe impacts** on African Agriculture and livelihoods

WITH adequate **financial & technological support**, farmers can play a key role in adaptation & mitigation

This is the time for Parties to
INCLUDE AGRICULTURE
in the agreed text

Climate smart agriculture can contribute to food security, adaptation and mitigation

There is need for the establishment of an SBSTA **Work Program on Agriculture** that covers both adaptation and mitigation and addresses the needs of African farmers

Transparent and inclusive governance of climate funds is needed for farmers to benefit

Pledges for financing and adaptation and mitigation in developing countries must be **honored**

There is a need for **binding agreements** for the post Kyoto regime

COP17/CMP7
UNITED NATIONS
CLIMATE CHANGE CONFERENCE 2011
DURBAN, SOUTH AFRICA

African AGRICULTURE can no longer wait
...FARMERS are part of the SOLUTION...
...Agriculture **MUST** be IN!
