

### **Evaluating Climate Adaptation**

Kenneth Chomitz Senior Advisor, Independent Evaluation Group Kchomitz [at] worldbank.org www.worldbank.org/ieg/climatechange

## **IEG's Climate Evaluation Series**

Phase I: Win-win Energy Policies 2009 Phase II: Mitigation 2010 Phase III: Adaptation 2012

#### **Evaluation questions**

# T.T.

#### What actions are

- Relevant
- Effective
- Efficient

....in promoting adaptation

What is the relationship between adaptation and development – how does the need for adaptation change development practice?

## Three kinds of adaptation needs

#### Chronic climate-related conditions

Extreme events

Inexorable calamities

## **Evaluating impacts on resilience**

Chronic climate-related conditions	Use standard ex post impact assessment
Extreme events	Ex ante assessment
Inexorable calamities	Ex ante assessment

## Interventions to be evaluated

#### Adaptation analogs, e.g.

- Flood prevention
- Mangrove planting
- Drought mitigation
- Hydrometeorology systems
- Mainstreaming climate change into the design and appraisal of long-lived investments, e.g. hydropower and protected areas

#### Explicit adaptation projects

 Including climate and vulnerability assessments, capacity building, planning, and institutional development

## **Emerging issues and questions**

- Is it meaningful to distinguish adaptation projects from (other) development projects?
- Can we come up with good measures of impacts on resilience or vulnerability?
- When is it essential to build long-term climate considerations into project or program design?
- Can downscaled climate models provide the information that decision-makers need?
- Are there any examples of effective land used planning?

# Thank you!
