

# EKF is committed to evolving our green business and set targets for the future

- › EKF – Denmark’s Export Credit Agency has committed to an ambitious net-zero emission target by 2045. This pledge is our contribution to the fulfillment of the Paris agreement and Denmark’s ambitions on climate.
- › Seize opportunity in the green transition - EKF has a committed ambition to issue guarantees and loans that support the green transition. From 2022 to 2030 EKF will finance green projects worth EUR 20bn.

# Key elements of our policy

As the world faces significant threats from the global climate crisis, we see it not only as our responsibility, but as our obligation to act.

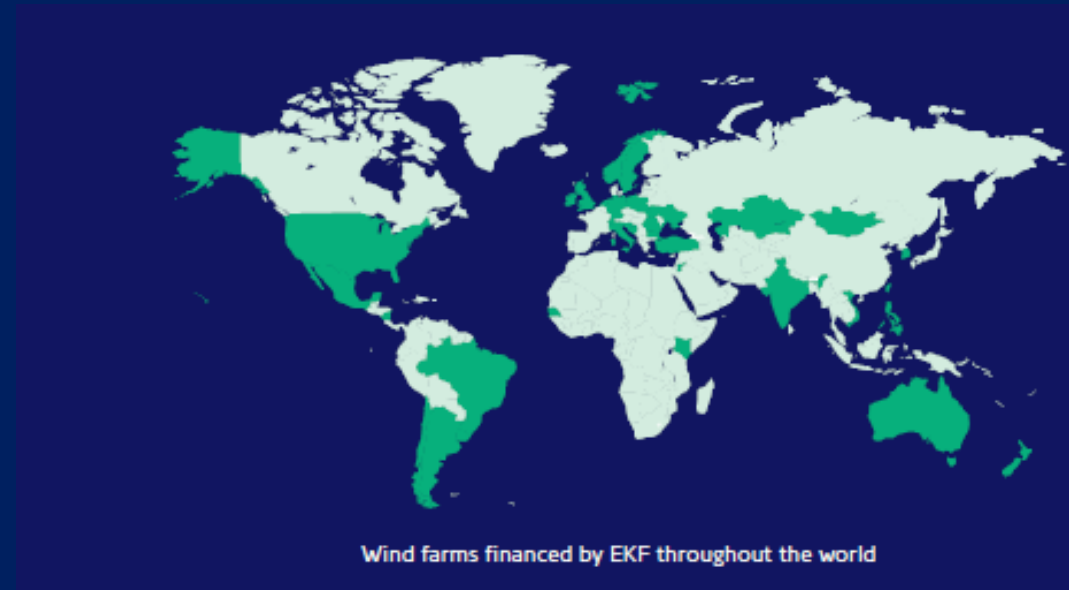

EKF will initiate the following initiatives:

- ✓ Phase out finance for projects incompatible with the energy transition and work for international phase-out agreements in order work with customers to help them innovate for reduced emissions
- ✓ Consolidate its position within renewable energy solutions, especially in the light of the intensified global competition in this sector.( wind, solar, PtX)
- ✓ Pursue global leadership in the international efforts for pro-climate export finance.
- ✓ Increase engagement in low-emission sectors and take the lead in financing future CCUS projects (Carbon capture, utilization and storage), so that EKF in the future finances projects that collect CO<sub>2</sub>.
- ✓ Develop financial solutions and specific instruments for promoting the energy transition in the hard-to-abate sectors.

# EKF is the world's greenest export credit agency

We build our green future on a solid track record

- › In the last 10 years alone, EKF has co-financed 120 wind farms, mobilizing private capital worth more than EUR 54bn in projects spanning from Taiwan to Brazil. EKF has been involved in financing almost 30% of total offshore wind capacity, including the largest wind farms in the North Sea, Africa and Taiwan. With new climate technologies emerging, EKF is ready to do more.
- › Building on our track-record in renewable energy projects and utilizing our strengths in financing, we will continue to mobilize international capital to accelerate the green transition globally.
