

# **Technical option of REL/RL development**

**-Information for REL/RL development  
and idea for national forest monitoring system –**

**Development of NFMS and MRV system for REDD+**

**-Learning from Demonstration Activities-**

**May 21, 2012**

JICA Expert  
KEI SUZUKI

# Contents of presentation

- Development of interim REL/RL in national scale (Case study in Vietnam)
- Stepwise approach for development of National Forest Monitoring System

## **“Study on Potential Forests and Land Related to Climate Change and Forests” funded by JICA**

1. Development of Activity Data using RS data
2. Development of Emission Factor using NFI
3. Setting interim RL/RELS for REDD

# Methodology for estimating carbon change

## Activity Data

Arrangement of existing data  
and/or searching archived data

Classification using various  
kinds of technique

Forest Types  
Map

## Emission Factor

Arrangement of existing

Discussion and design of  
field survey

Existing Biomass  
by Forest types

Estimating Carbon Change

REL/RL

Taking into account of  
national circumstances

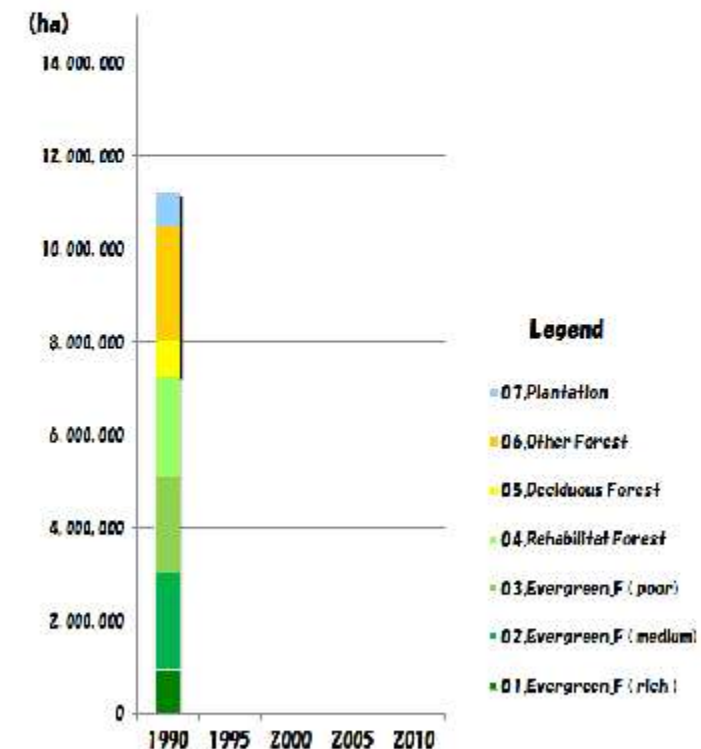

# Development of the forest distribution maps (Utilizing existing Data)

- RS imagery
  - 1<sup>st</sup> cycle 1991 – 1995: Landsat TM
  - 2<sup>nd</sup> cycle 1996 – 2000: Landsat TM+SPOT
  - 3<sup>rd</sup> cycle 2001 – 2005: Landsat ETM+
  - 4<sup>th</sup> cycle 2006 - 2010: SPOT5
- Visual interpretation and correction through field surveys
- Over 30 detailed LU/LC categories

# FDM 1990

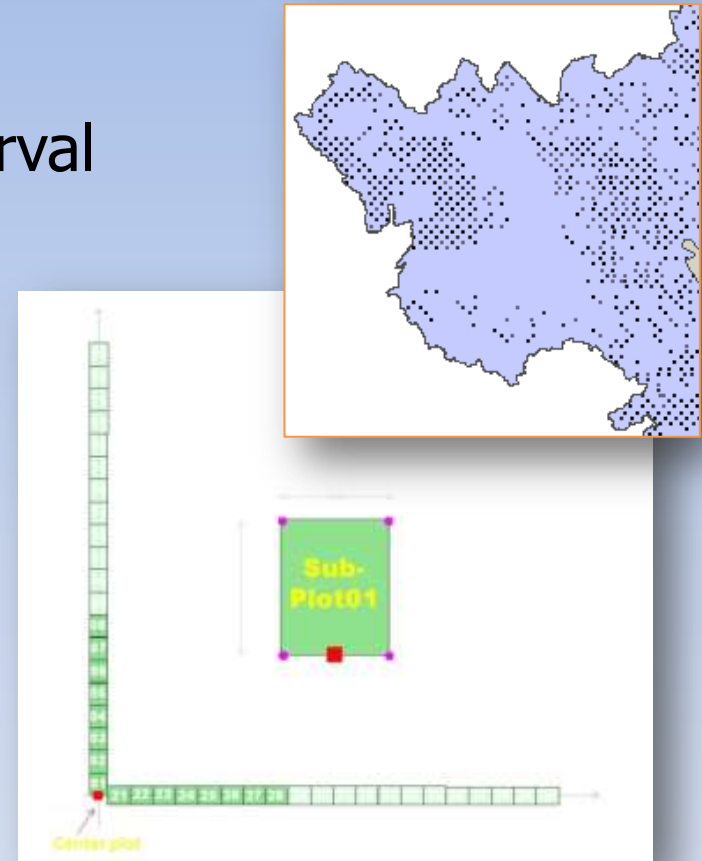

# Arrangement of the national forest inventory data (Utilizing existing Data)

- A sample plot system
- 4 cycles from 1991 with 5 years interval
  - 1<sup>st</sup> cycle 1991 – 1995: 3,000 Plots
  - 2<sup>nd</sup> cycle 1996 – 2000: 3,800 Plots
  - 3<sup>rd</sup> cycle 2001 – 2005: 4,200 Plots
  - 4<sup>th</sup> cycle 2006 - 2010: 2,100 Plots
- 8km systematic sampling
- 1 plot consisting with 40sub-plots
- Sub-Plot size=20m × 25m Rectangle

# Arrangement of the national forest inventory data

## Results:(Mean AGB+BGB par Regions and F.Types)

(CO<sub>2</sub>t/ha)

# Technical options when estimation of carbon change (Units of Aggregation)

# Summary of interim REL/RL based on BAU

Total=-0.62 M CO<sub>2</sub>t (From 2010 to 2015) ← Extrapolate by average model  
⇒ -0.124 M CO<sub>2</sub>t/year

# Contents of presentation

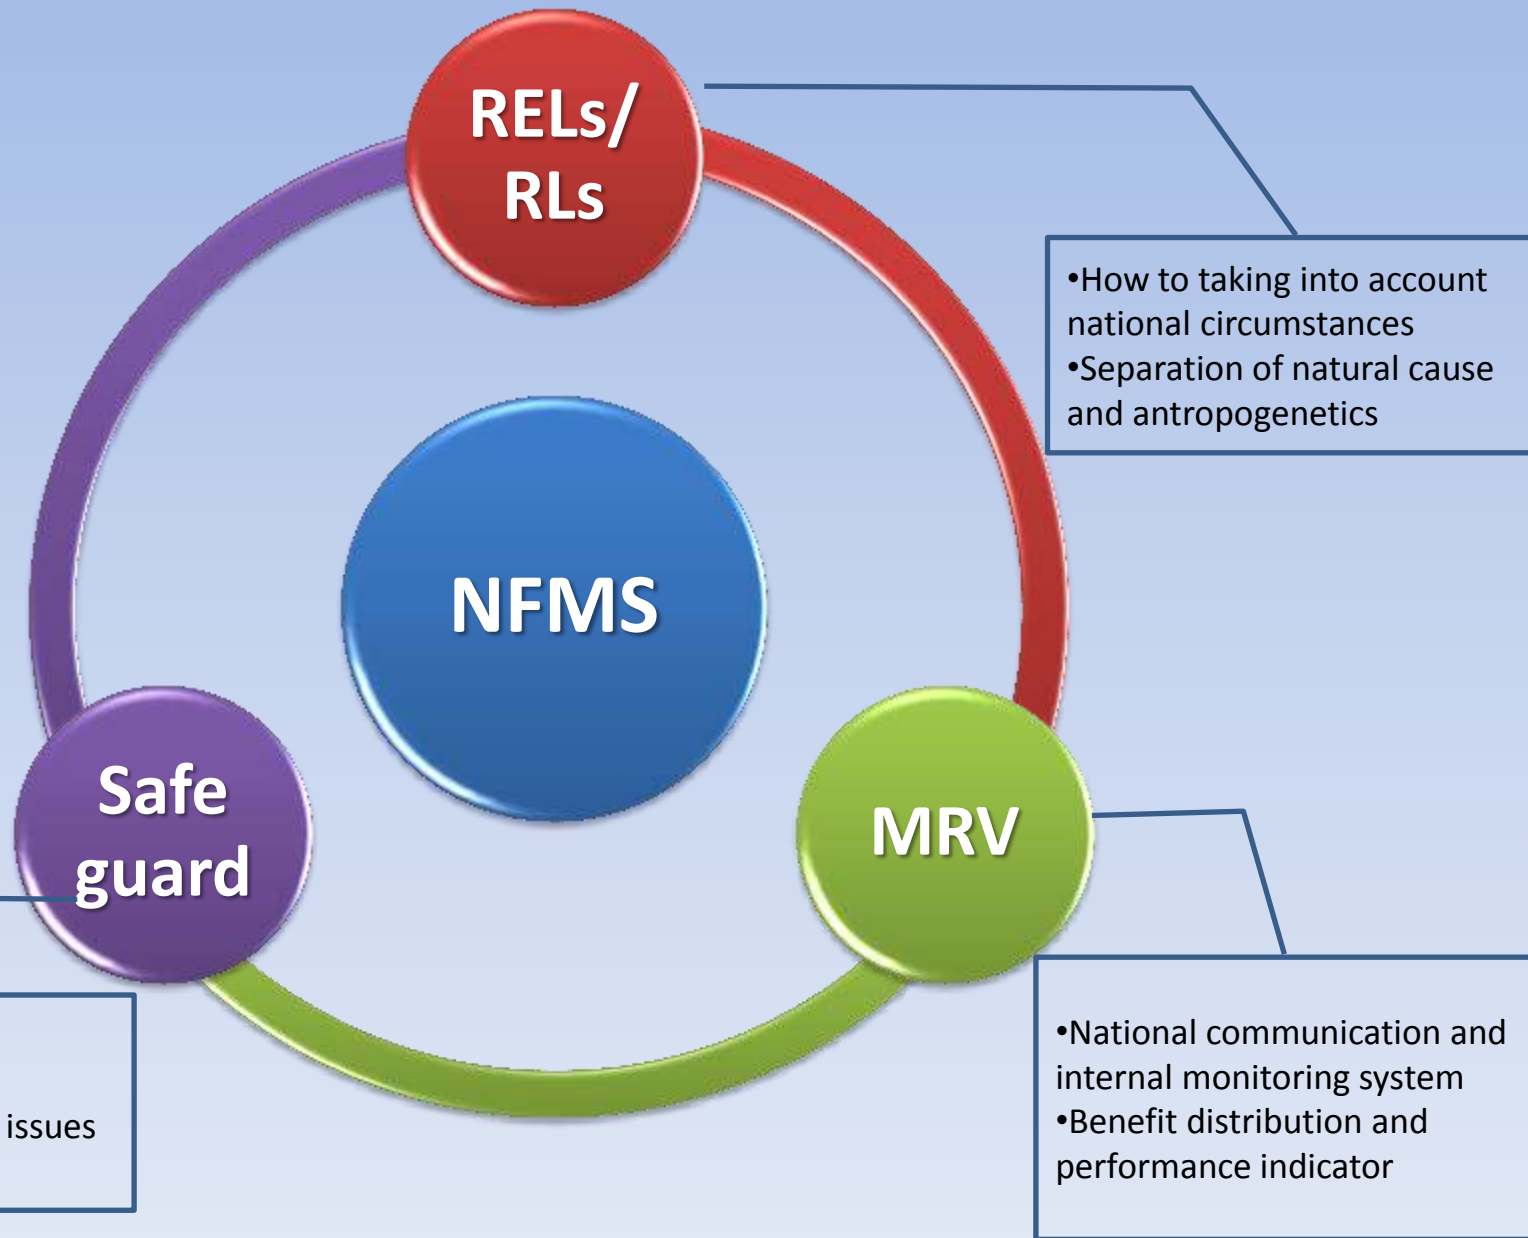

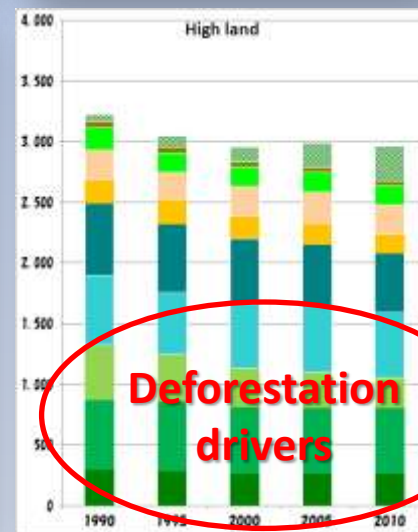

- Development of interim REL/RL in national scale (Case study in Vietnam)
- Stepwise approach for National Forest Monitoring System development

# Three Contents of REDD+

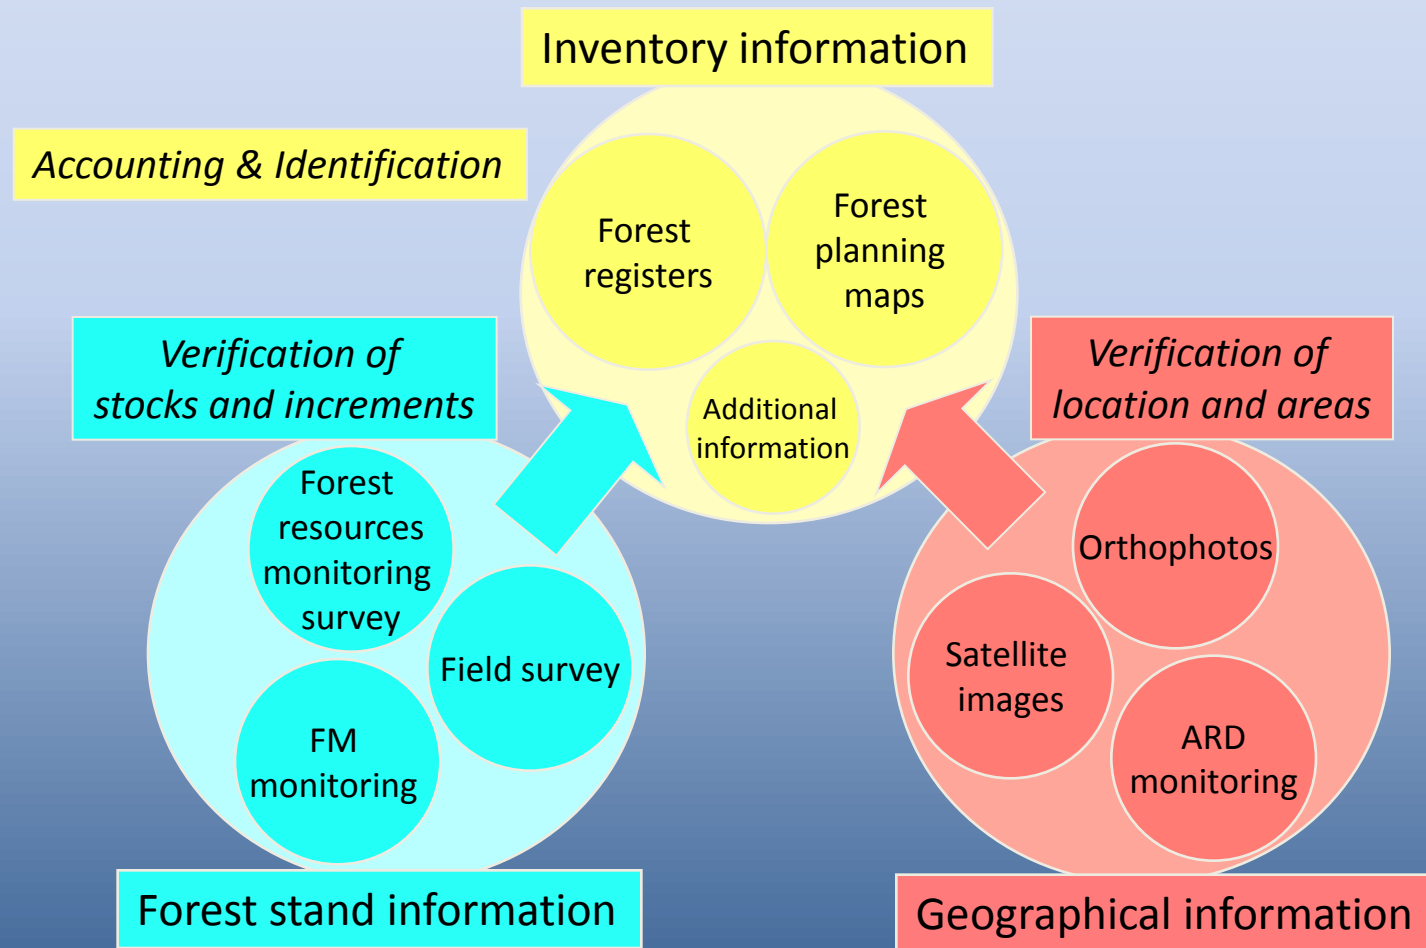

**Why we needs to collecting drivers and measures?**

# Conceptual Design of Forest GHG Accounting and Reporting System in JAPAN

- Accounting is based on forest registers and forest planning maps mainly
- Verification with independent stand and geographical information

# Stepwise approach in development of NFMS

## Aspect of forest resources

- Bio-diversity
- Forest Function

Carbon stock change (Tier-2)

Carbon stock change (Tier-1)

Forest type change (several times)

Forest type change (2times)

Forest area change

### Step-1

- NFMS is designed
- National strategy for REDD+ is established
- Major drivers are identified
- Control measures are decided
- Safeguard information system is designed

### Step-2

- NFMS is established (sub-nationally or nationally)
- REL or RL is constructed
- Control measures are implemented
- Safeguard information system is operated

### Step-3

- NFMS is implemented
- Carbon stock change
- Implementation progress of major driver control measures
- Progress on how safeguard is addressed and respected
- Strengthen of governance

## Aspect of policy and SG

Aspect of activities

Degradation (REDD)

Enhancement (REDD+)

Deforestation (RED)

Readiness

Phase-1

Design of SGI

Demonstration

Phase-2

Operation of SGI  
Policy measure

Full implementation

Phase-3

Addressed and respected to safeguard  
Policy measure and low enforcement

Thank you for attention
