

# COP 24 Side Event

## International Transport: Mission zero to align international transport with the Paris goals

Friday, December 07, 2018, 16:45 to 18:15; Room Pieniny  
COP 24 Katowice Poland 2018

This side-event will present the ongoing policy negotiations to regulate emissions from international aviation and shipping under ICAO and IMO, and ask what additional measures are needed to align with the temperature goals of the Paris Agreement. The aviation sector is at an advanced stage of designing its approach to limit emissions growth, largely via offsetting. The speakers will present analysis on quality and efficacy of offsets, providing insights into the likely mitigation impact of CORSIA demand under different eligibility restrictions. Speakers will present overview of pathways to decarbonise both sectors along with possible measures required to deliver.
