

More effective policies & measures - engendering better results through integrating gender aspects

Side Event at SB28, Bonn

Date: Monday, June 9th, 2008, 13:00-15:00

Location: MoT, TRAM

LIFE e.V. / gendercc - women for climate justice

The Side Event will show how to put gender sensitive climate policy into practice. We will focus on energy and transport policy at national and local levels. Based on the analysis of gender-disaggregated data, we will present responses from industrialised and developing countries. Gender sensitive communication and social marketing of climate change policy will be another focus in the side event. These approaches integrate greenhouse gas reduction, gender aspects and sustainable development, thus leading to more effective implementation of climate policy.

We then will discuss conclusions and recommendations for national and international climate policy.

Programme

The need for gendered approaches in local transport policy. Case studies in industrialised and developing countries.

Meike Spitzner, Wuppertal Institute for Climate, Environment and Energy, Germany

Energy projects combining environment, development and benefits for women.

Dorah Lebelo, CURES / Greenhouseproject, South Africa

Gendered energy consumption in Sweden and other European countries.

Dr. Annika Carlsson-Kanyama, SOI Sweden

Gender sensitive communication and social marketing of climate change policy

Dr. Angela Franz-Balsen, University of Lueneburg/Brussels (tbc)

Facilitator: Gotelind Alber, Sustainable Energy and Climate Policy, Germany
