Universal Versatile Society.

UVS is an Indian NGO, founded in 2005 in special consultative status with UN ECOSOC and UNCCD. With state government's support, UVS has taken the lead in Climate Capacity-building, Education Equity, Public Health, and Women Empowerment other thematic areas of 17 SDGs by mobilising global social resources for years.

I. Research Hub-based Mental Health Program

Phase 1

In this phase, the mass dissemination of the program is projected. It will be promoted via local media, community gatherings and orientation to the population to build awareness and intent of the program within the community and advance access to it.

Phase 2

In this phase, all community intervention activities (fieldwork), collection of the household data through house survey and preliminary diagnosis and referral of high-level complexity cases for hospital care.

Phase 3

In this phase, individual and community monitoring activities are contemplated. Psychoeducational with the guides of psychosocial care for the community and the volunteer team in the field shall be shared.

Phase 4

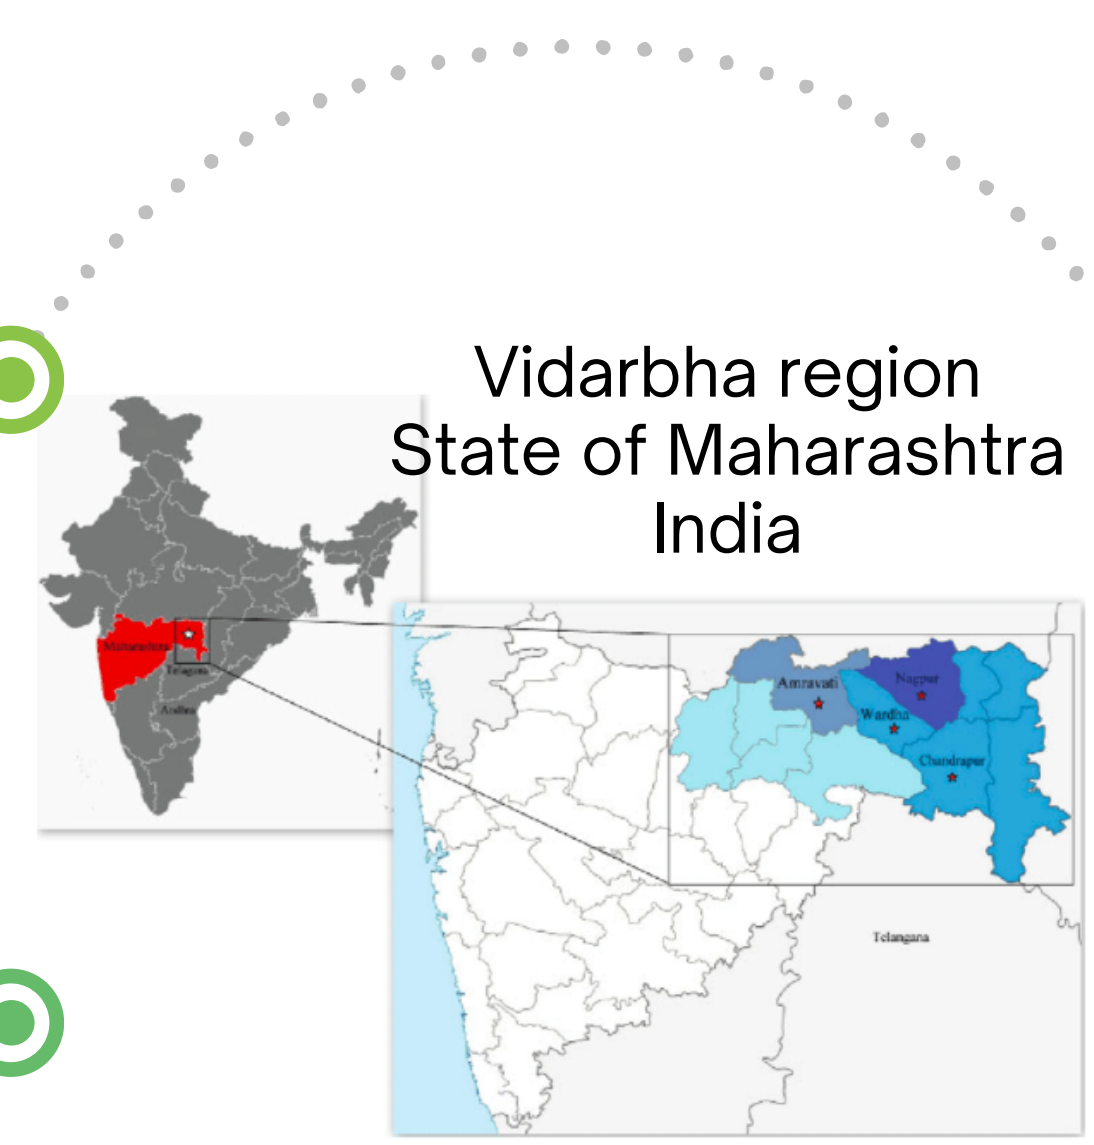

In this phase, training programs aimed at the prevention of suicide and suicidal behaviour management will be conducted – yoga, medication, community activities, etc. Even after the project's completion, the community engagement program shall continue through the establishment of the focus group consisting of local authorities, volunteers and self-help groups who will continue to engage the community by conducting happiness programs and monitoring the process.

Phase 4 - Training

Phase 3 - Suicide Behaviour Management

approx. 8,500 farmers died of suicide between 2016 to 2019

Phase 1 - Positive Promotion of Mental Health and Prevention of Suicide

Phase 2 - Detection of the Risk of Suicidal Behaviour

II. Digitalised Eco-village Program

“Eco-city” - was firstly coined by Richard Register in his 1987 book Ecocity Berkeley, in the context of an organization called Urban Ecology.

The program was also launched to enable STEM women’s participation in agriculture, empower youth leadership to dive into disruptive resolution and rouse awareness of veganism among young people.

- Establish eco-villages fueled by powerful and user-friendly AI systems
- Impulse youth to become KOLs in leading vegan city campaigns.

2015

India has been championing information and communications technology (ICT) as a driver for growth in the region since 2015

In November 2015, India offered a US\$1 billion credit line to promote projects that support physical and digital connectivity between India and ASEAN countries.

Nov. 2015

2016

India proposed setting up a regional high-capacity optical fibre network, a national rural broadband network, digital villages in rural and remote areas, and capacity building programs.

India planned to build 100,000 digital villages in the next five years. Unfortunately, the ambition was almost melted in the thin air owing to covid-19

Oct. 2019

Dec. 2021

UV Society partook in the 2021 Global Agrilnno Challenge and was selected as Finalist out of 157 teams from 35 countries.

Future Goals & Recommendations

International Partnerships

Nisarg Foundation

Resolutions on efficient electrification and better plastic management for regenerative agriculture.

WIKIFARMER

Wikifarmer

E-marketplace and online library for farmers as open resource syndication in the fields of climate action, food security, vegan cities and environmental governance.

- How to combine the advantages of nature-based and technology-shored approaches in coordination with First Nations to tackle climate crises facing farmers
- How to transform meat eaters into vegans and empower youth to become catalysts in building vegan cities
