

## GHG NATIONAL REGISTRIES IN EUROPE – STATE OF PLAY

Implementing the systems of emissions trading  
COP11 side event

[romain.fremont@caissedesdepots.fr](mailto:romain.fremont@caissedesdepots.fr)

### From an institutional system...

- Registries under production are now fully compliant with EU regulations
- About 80% compliant with future “ITL requirements”
- Past two years spent on developing to obtain accreditation from the EU Commission
- System includes all institutional functions (issuance, allocation, transfer, retirement, etc.)
- Objectives so far:
  - Functionally to meet textual requirements
  - Technically to communicate with hubs (CITL)
  - Being operational asap
  - (If possible) efficient tool for registry administrators

## ...to a client-oriented online system
