Contents

Climate change and the need for CO₂ geological storage 4

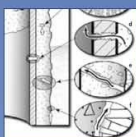

1. Where and how much CO₂ can we store underground? 6

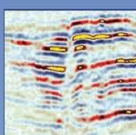

2. How can we transport and inject large quantities of CO₂? 8

3. What happens to the CO₂ once in the storage reservoir? 10

4. Could CO₂ leak from the reservoir and, if so, what might be the consequences? 12

5. How can we monitor the storage site at depth and at the surface? 14

6. What safety criteria need to be imposed and respected? 16

Glossary 18

What CO₂GeoNet can do for you 19

This Brochure was produced thanks to the contributions of:
Rob Arts, Stanley Beaubien, Tjirk Benedictus, Isabelle Czernichowski-Lauriol, Hubert Fabriol, Marie Gastine, Ozgur Gundogan, Gary Kirby, Salvatore Lombardi, Franz May, Jonathan Pearce, Sergio Persoglia, Gijs Remmelts, Nick Riley, Mehran Sohrabi, Rowena Stead, Samuela Vercelli, Olga Vizika-Kavadias.

Translation initiated by CO₂GeoNet and then continued under the [CGS Europe project](#)
