

Climate Smart Action through Local Markets

SNV at COP24

SNV

We engage the private sector, consumers and authorities to help build local markets for climate smart agriculture and energy solutions. By attracting financial investments and supporting inclusive policy development, we scale up our results and create lasting impacts.

Our work on climate change

Building on our extensive experience in value chain development, we accelerate the adoption of climate smart business practices that build productivity, resilience and mitigation.

Our climate smart screening tools allow us to identify, incubate and attract investment for business cases that support climate smart practices. Utilising market-based services, we increase production and efficiency in value chains and actors investment-ready.

We scale results by de-risking private sector investments with matching grants, implementing results-based financing systems, and attracting financing from investors. We support the development of conducive policies to initiate sector transformation.

Expertise areas

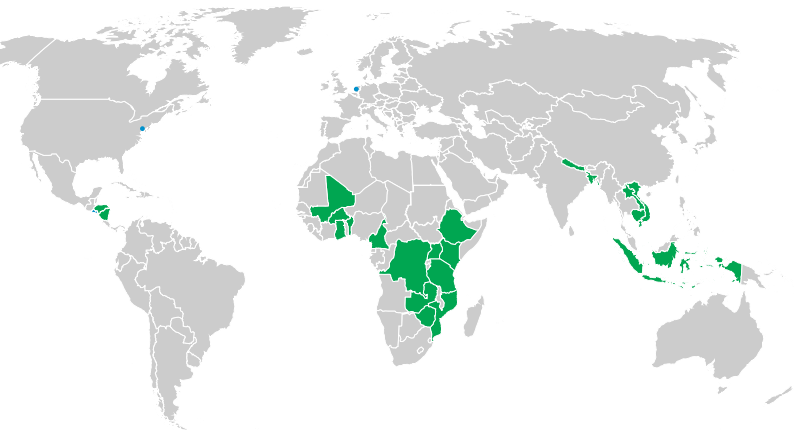

- Climate Smart Agriculture
- Deforestation Free Value Chains
- Off-grid Energy Markets
- Pastoralism
- Energy for Agricultural Production
- Productive Water Use

About SNV

Founded in the Netherlands in 1965, SNV has a long-term presence in countries in Asia, Africa and Latin America. Our global team of advisors work with local partners to equip communities, businesses and organisations with the tools, knowledge and connections they need to increase their incomes and gain access to basic services – empowering them to break the cycle of poverty and guide their own development.

Our experience

Currently we are implementing climate-related projects in 22 countries.
