

COP24 SIDE EVENT

CLIMATE CHANGE IMPACTS AND THE HUMAN RIGHT TO WATER

Thursday, 13 December 2018 15:00 - 16:30 Room: Bieszczady

OVERVIEW

Climate change has affected water availability in several regions of the globe, bringing forward the topics of water access and distribution. The right to water is a cross-cutting issue that touches on the effects of climate change and the rights of local populations, as well as topics such as energy production and agriculture. It is a clear example of competing interests on a scarce resource and of the need to manage a common good. This side events aims to give an overview of the main topics concerning water and climate change and bring examples of what is happening in certain regions across the globe.

AGENDA

Introduction

 Rachele Rizzo – UNFCCC Contact Point, Italian Climate Network

Climate change and water issues around the globe

Marirosa lannelli – President,
Water Grabbing Observatory

Gender and Woman perspective in water resources management in a threatening climate scenario
