

## Energy Studies Institute (ESI) Tropical Marine Science Institute (TMSI)

who we are, what we do

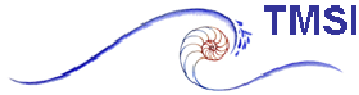

**energy.**  
**economics. security. environment**

ENERGY  
STUDIES  
INSTITUTE

- ESI is a policy-oriented research institute that seeks to produce independent, quality and timely research and analysis on energy economics, security and the environment that will be of key interest to policy makers, industries and the community.
- The global energy landscape is one that is changing rapidly. The threat of a worldwide depletion of fossil fuels, the impact of climate change, and the growing importance of geopolitics on energy supplies have led to an urgent call for new energy policies and interventions.
- Against this backdrop, the Energy Studies Institute (ESI) seeks to advance the understanding of local, regional and global energy issues through independent research and analyses aimed at addressing, informing and influencing public opinion and policies.

## Tropical Marine Science Institute

- ESI's partner in this study of alternative energy potential.
- TMSI is a centre of excellence for research, development and consultancy in tropical marine science. With its multi-disciplinary research laboratories and active international links, its work includes the areas of Physical Oceanography, Water Resources, Underwater Acoustics and the implications of Climate Change.
