

# Bridging the gap

Pathways for Transport in the Post 2012 Process

## Sustainable Urban Transport Solutions for East African Cities 'SUSTRAN Project'

Bridging the Gap between Transport and Climate Change in Africa,  
Doha, 01.12.2012

# CONTENTS

1. Introduction sustainable mobility
2. Objective
3. Project components
4. Implementation arrangements
5. Project lessons

# Background

Energy-related CO2 emissions of various sectors (worldwide)

# Introduction

## BACKGROUND

By 2030, the population living in urban areas in East Africa will increase from 7.5% of the average annual population (1950 to 2000) to 22.6% (2000 – 2030)

Preparing for this continued urban growth now provides the opportunity to avoid mistakes made by other cities already further along in their development paths.

Start: June 2011

GEF funding: USD 2.8 million

Model initiative supporting the design & implementation of integrated sustainable transport projects in the three capital cities of Kenya, Uganda and Ethiopia

### Strategic Response

Upgrade transit systems  
Implement improved non-motorized transport infrastructure  
Apply travel demand management  
Other supporting policies

Reduce growth in private motorised vehicles

# SUSTRAN Project cities

Addis Ababa

Nairobi

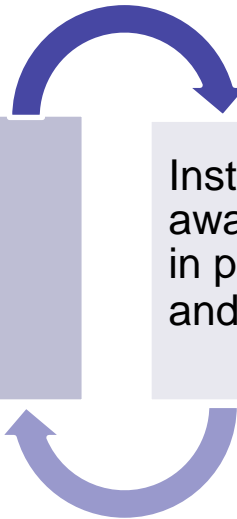

Kampala

# Objective

**Create the technical and institutional basis for implementing metropolitan sustainable transport networks.**

Technical basis: Establish a demonstration corridor for sustainable urban mobility.

Institutional basis: Building awareness, understanding, skills in public institutions, the public and other stakeholders.

# Project components

1. *Technical assistance and institutional support* for the development of a **comprehensive sustainable metropolitan transport system** in Addis Ababa, Kampala and Nairobi

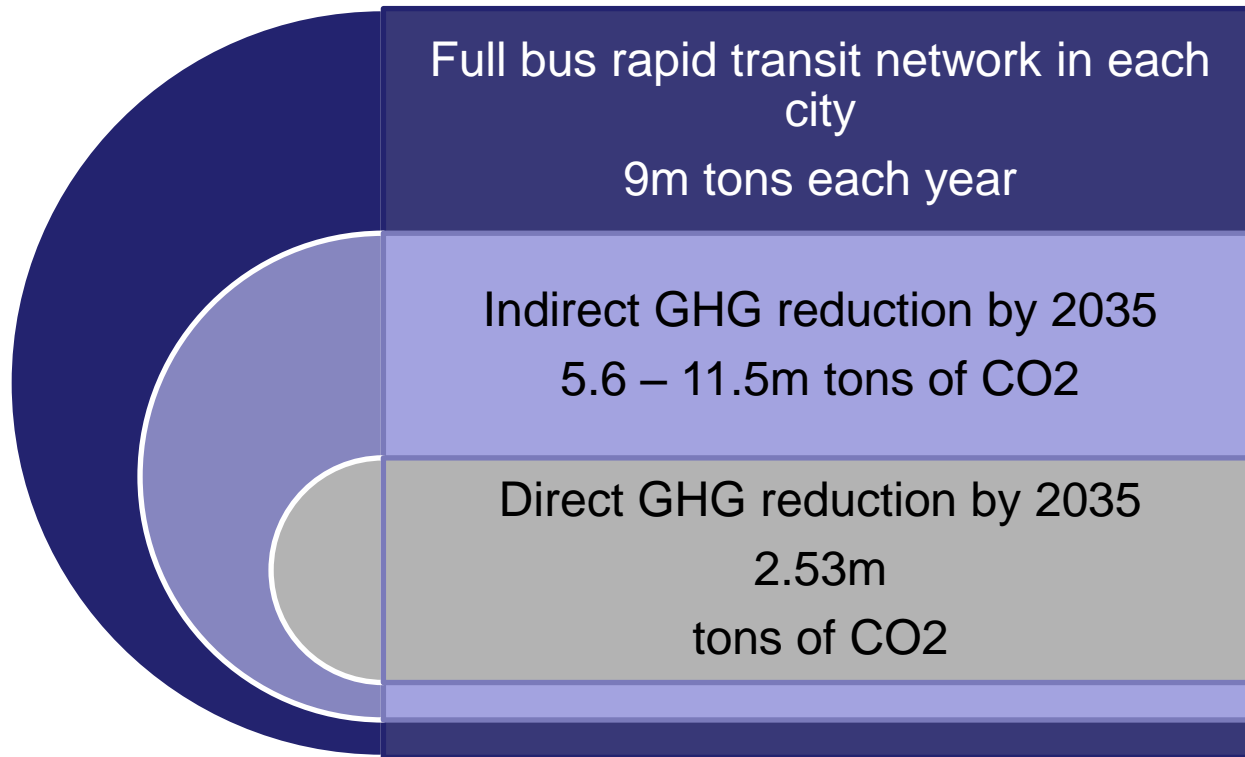

2. *Planning & design* for implementation of a **demonstration sustainable transport corridor** in each city: bus rapid transit (BRT), non-motorized transport (NMT) & transportation demand management (TDM) measures

3. Feasibility of application of **clean vehicles and fuel technology initiatives** in Addis Ababa, Kampala and Nairobi

4. Regional **capacity building, awareness raising and networking**

# Anticipated project benefits

## Anticipated project benefits:

Coupled with land use regulations and as a natural result of better access, property value increases, stimulating denser urban development

**If gold standard BRT is built, indirect GHG reductions through replication or expansion in that city. Expansion factor: 4 to 8 times.**

Corridors in each city by 2035:  
Kampala – 65 km.  
Addis - at least 58 Km.  
Nairobi - 75 Km.

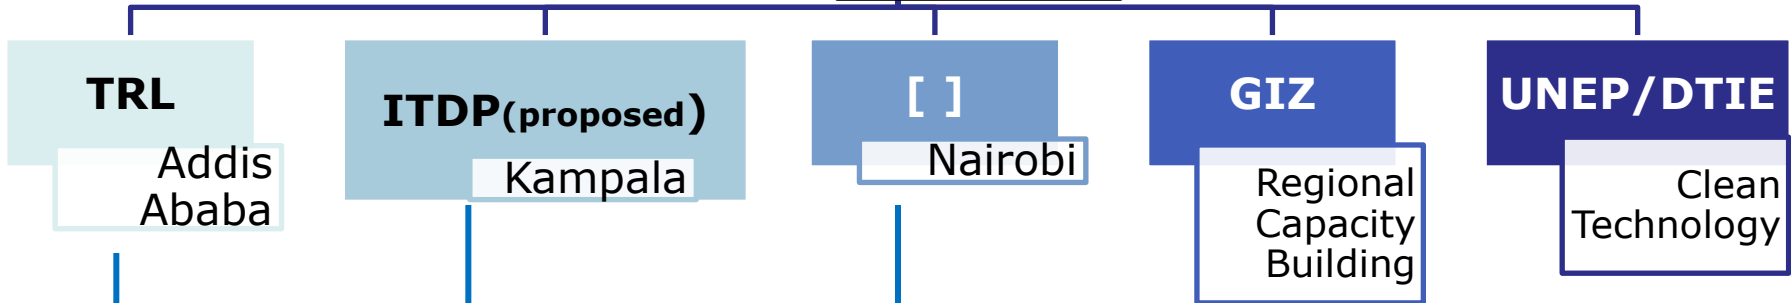

# Implementation partners

**GEF**

UNEP  
(implementing agency)

**UN-Habitat**

Executing agency

- National Steering Committee**
- Ministry of Transport & Communications
  - Addis Ababa City Council
  - Public Works Dep.
  - Mini Bus Owners Association
  - ANBESSA Bus Co.
  - Police
  - AFD

- National Steering Committee**
- ITDP
  - FABIO
  - Ministry of Works and Transport
  - Kampala Capital City Authority (KCCA)
  - UTODA
  - Police
  - World Bank

- National Steering Committee**
- KURA
  - Nairobi City Council
  - Office of the Prime Minister
  - NEMA
  - Ministries of: Transport, Finance, Lands, Nairobi Metropolitan Development, Planning, Roads, Public Works
  - EU
  - KEPSA
  - Kenya Bus Service
  - KIPPRA
  - Matatu industry
  - NRSC
  - University of Nairobi
  - AFD, AfDB, JICA, World bank

# SUSTRAN lessons – Clean Technology

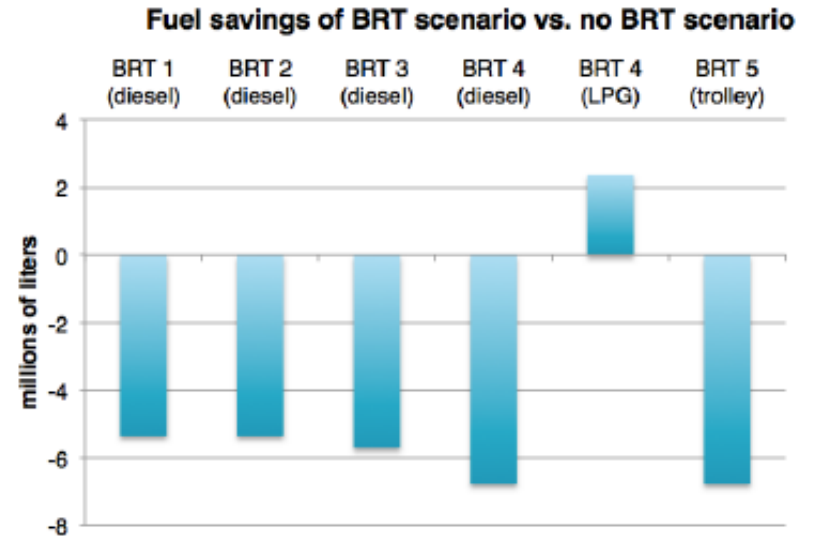

## CLEAN TECHNOLOGY OPTIONS

Cost and benefit analysis carried out in the three cities based on:

- Technology availability
- Fuel availability and quality
- Maintenance practices and capacity.

ICCT report

**Main probable emissions reductions will result from modal shift to BRT system**

# SUSTRAN lessons – Clean Technology

City	Assumed BRT bus demand, 2030
Nairobi	295
Kampala	100
Addis Ababa	237

Fleet of BRT buses – ADDIS ABABA

*Brown – Euro IV diesel*

*Blue -- Electric*

*Assuming that half of the buses will be deployed in Phase 1 (2013-2020) and half in Phase 2 (2020-2030). BRT bus fleet growth assumed to be linear over each phase (ICCT).*

**Hybrid diesel Euro IV buses recommended for the initial phase (2013-2020) and electric buses in the second phase (2020-2030)**

# Clean Technology assessment – Addis Ababa

Scenarios	Annual technology cost	Annual health benefits	Annual fuel savings benefit	Annual time savings benefit
<b>BRT 1: Diesel BRT</b>	\$17.5	\$0.14 to 1.4	\$10.0	\$7.7
<b>BRT 2: Clean diesel BRT</b>	\$18.9	\$0.14 to 1.5	\$10.0	\$7.7
<b>BRT 3: Hybrid diesel BRT</b>	\$20	\$0.14 to 1.5	\$10.7	\$7.7
<b>BRT 5: Diesel + Electric trolley BRT</b>	\$22.4	\$0.14 to 1.5	\$12.7	\$7.7

*Summary of cost and benefits of technology scenarios in 2035 - ICCT*

# Clean Technology assessment – Kampala

Scenarios	Annual technology cost	Annual health benefits	Annual fuel savings benefit	Annual time savings benefit
<b>BRT 1: Diesel BRT</b>	\$8.7	\$0.02 to 0.21	\$5.9	\$3.4
<b>BRT 2: Clean diesel BRT</b>	\$9.4	\$0.02 to 0.22	\$5.9	\$3.4
<b>BRT 3: Hybrid diesel BRT</b>	\$9.6	\$0.02 to 0.22	\$6.3	\$3.4
<b>BRT 5: Diesel + Electric trolley BRT</b>	\$9.7	\$0.02 to 0.22	\$7.5	\$3.4

*Summary of cost and benefits of technology scenarios in 2035 - ICCT*

# Clean Technology assessment – Nairobi

Scenarios	Annual technology cost	Annual health benefits	Annual fuel savings benefit	Annual time savings benefit
<b>BRT 1: Diesel BRT</b>	\$23.7	\$0.06 to 0.6	\$19	\$6.6
<b>BRT 2: Clean diesel BRT</b>	\$25.6	\$0.07 to \$0.7	\$19	\$6.6
<b>BRT 3: Hybrid diesel BRT</b>	\$26	\$0.07 to \$0.7	\$20	\$6.6
<b>BRT 4: LPG BRT</b>	\$28.5	\$0.07 to \$0.7	\$16	\$6.6
<b>BRT 5: Diesel + Electric trolley BRT</b>	\$24.6	\$0.07 to \$0.7	\$24	\$6.6

*Summary of cost and benefits of technology scenarios in 2035 - ICCT*

# SUSTRAN Project lessons

Prioritise capacity building for all key stakeholders via peer to peer sharing

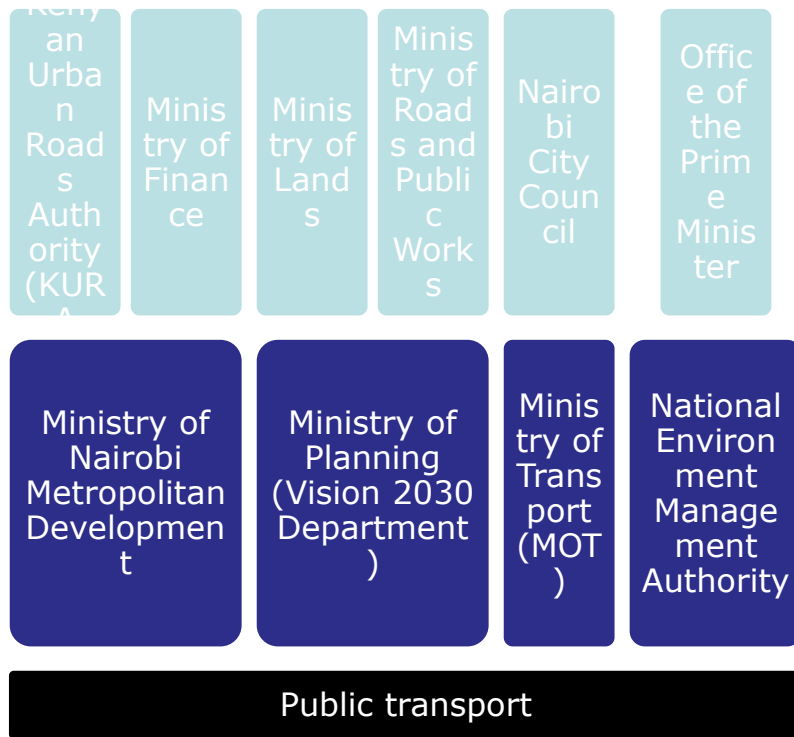

## Study tour and exchange of experiences in Addis Ababa, Kampala and Nairobi

- Regional training, focusing in stakeholders engagement, industry transformation, integration of different modes and institutional development for mass rapid transit
- Regional collaboration (lessons from Johannesburg Rea Vaya BRT, Dar es Salaam DART implementation, Lagos LAMATA)
- Platform to advocate for national urban policies that support smart growth (compact cities, planned city expansion and infill)

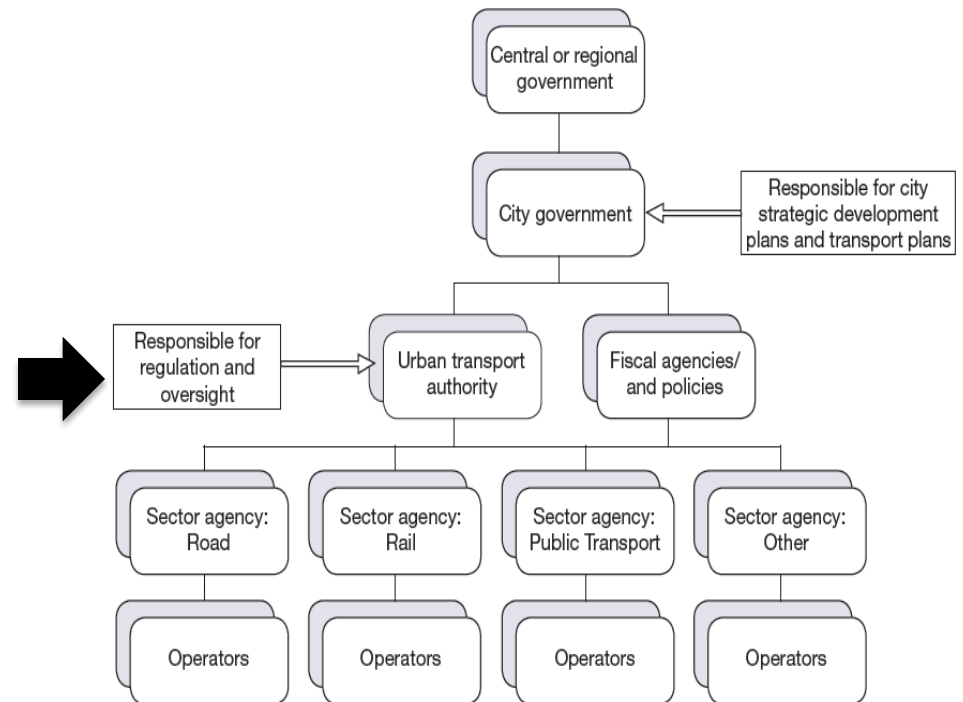

# SUSTRAN Project lessons

- Early in the project engage all stakeholders and involve local communities that are affected by the project;
- Support an independent transport entity, with decision making power and financial, legal, institutional and technical capacities.

Fragmented responsibilities

Source: Asian Development Bank

Clear responsibilities

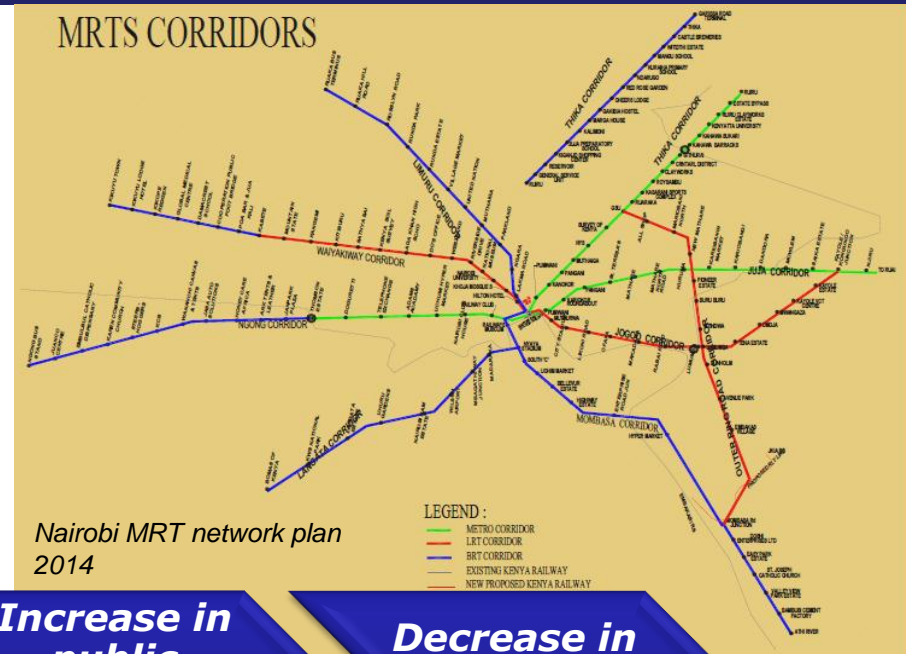

# SUSTRAN Project lessons

- Start with a pilot (learning curve)
- Focus on integration of different transport modes
- Integrate with urban planning and land use plan
- Use experience from other projects, but adopt the system characteristics to the local needs.

## *E.g. Integrated public transport*

- *Service quality car comparable*
- *Multi-modal network integration*
- *Schedule and connection integration*
- *Fares and tariff integration (one ticket)*
- *Infrastructure integration*

**Integrated  
public  
transport**

**Meets the  
needs of  
customers**

**Increase in  
public  
transport  
use**

**Decrease in  
private  
vehicle use**

**UN**  **HABITAT**  
FOR A BETTER URBAN FUTURE
