

## What are the experience and challenges with the existing reporting?

---

- Inventories
  - Multi years experiences, not one way to do it
  - In practise often improvements after 2 years
  - Increasing smaller sources; are they really relevant?
- Biennial reports
  - Inconsistency with NC guidelines
  - Learning process & now on-going work process
- National Communication
  - Consistent projections in combination with PaMs impacts continues to be a challenge
  - All information reported, still valuable?

## How the existing reporting practice could serve as a basis for the new transparency framework, including flexibility?

---

- Speed up the learning curve
- Set clear priorities in improving: not all at the same time is possible
- Institutional arrangement(s) to ensure consistency and efficiency
- Review/analysis should be more on assisting and feed in national work processes
- Clear guidance is a big advantage
