

PFAN in Asia

What is CTI PFAN?

The Private Financing Advisory Network (CTI PFAN) is a multilateral, public-private partnership that nurtures promising, innovative clean energy projects by bridging the gap between investors and clean energy entrepreneurs and businesses.

CTI PFAN brings together private-sector companies with experience in financing climate-friendly businesses to screen business plans and select the most economically viable and environmentally beneficial projects. For those entrepreneurs and businesses selected, PFAN provides guidance on overall project structure and business plans, feasibility studies, and introductions to investors.

In Asia, CTI PFAN's goals are to accelerate technology transfer and diffusion under the UN Framework Convention on Climate Change (UNFCCC), reduce greenhouse gas emissions, promote low-carbon, sustainable economic development, and help facilitate the transition to a low-carbon economy by increasing the financing opportunities for promising clean energy projects. CTI PFAN accomplishes this by building a network of investors, entrepreneurs, technical experts and government representatives with a common goal of increasing the viability of clean and renewable energy.

CTI PFAN is supported in Asia by the Climate Technology Initiative, the US Agency for International Development (USAID) and the International Center for Environmental Technology Transfer (ICETT). In India and China, CTI PFAN is also supported by the Asia Pacific Partnership on Clean Development & Climate (APP). CTI PFAN is managed in Asia by the USAID ECO-Asia Clean Development and Climate Program (ECO-Asia).

The CTI PFAN Network in Asia

In early 2009, CTI PFAN did not exist in Asia. But in only six months, starting in March 2009, working through the USAID ECO-Asia Clean Development and Climate Program (ECO-Asia), CTI

PFAN networks were established in China, Indonesia and the Philippines, as well as regionally.

As of October 2009, CTI PFAN had 40 projects in its development pipeline in Asia, representing over US\$ 1.7 billion of investment in various technologies in China, India, Indonesia, Laos, the Philippines, Sri Lanka and Thailand. This, however, is only the beginning. In Asia, CTI PFAN estimates that it will develop a pipeline of 60 - 80 projects over a 3 year period to the end of 2012.

CTI PFAN's regional and in-country networks are actively seeking new network members and projects for the development pipeline. Please send all enquiries and project proposals to the contacts mentioned below. Project proposals can be submitted at any time in free form; guidelines are available at www.cti-pfan.net.

Clean Energy Financing Forums in the Asian Region

CTI PFAN Asia organizes a number of Clean Energy Financing Forums in the region on a regular basis. During 2010, a regional forum is planned in Bangkok for the Asia region, and national forums will be held in the Philippines, Indonesia, China and India. See www.cti-pfan.net for further details.
